

TeslasPEMF Device(s) Frequently Asked Questions

TeslasPEMF provides both Consumer Machines for home residents to purchase and use, also, TeslasPEMF provides High Volume Use/High Power Commercial Machines for Health Care businesses to purchase and provide usage on.

Both TeslasPEMF Systems are the most powerful PEMF Machines available in Today's Market

A machine with our Specs often costs \$20,000 to \$40,000 in the commercial market.

TECHNICAL SPECS

- **Weight:** 34 lbs + Advanced Coil Weight 10 lbs
- **Dimensions:** 10-5/8"W x 8-3/8"H x 15-1/2"D
- **System Voltage:** 120v AC
- **Maximum System Power:** 2500 w
- **Frequency Ranges:** 7-10,000 Hz
- **Intensity:** 350 continuous gauss, can go up to 150,000 peak gauss
- **Waveform:** Supports all waveforms

Why Choose TeslasPEMF Machine?

Extra Coil for more Power

Faster Results

Deep Penetration

Improved Blood Flow

Detoxifies the Body

Triggers Cellular Vibration

What Sets TeslasPEMF Machine Apart?

Pre-Programmed Frequencies

Use the tablet or laptop to generate frequencies unlike systems with on-board frequencies

Supports all waveforms

TeslasPEMF supports all type of waveforms. PEMF Machines produce either a square, a saw tooth, a sine, a trapezoidal or a custom waveform.

Magnetic Field Detection

It is designed so you will know what exactly is happening at the coil itself.

Input Energy Meters

You will now know the exact power that is being delivered to the coiling as you flip through different frequencies and intensities.

Frequency Meters

Frequency Meter lets you monitor the frequencies in your PEMF sessions.

Hardware protection

Amplifier over drive, System overheat and Thermal circuit breaker protection. These protective measures make our devices last longer than most of the other PEMF devices.

How to use TeslasPEMF?

Our **website** provides all kinds of resources that you can use to get the best out of your TeslasPEMF Machine.

In addition, we have a **support community** to help you get started.

Benefits of Dual Coil PEMF Machines

Dual coil system covers more parts of your body and gives you twice the coverage of the pulsed electromagnetic field.

- **Share your TeslasPEMF sessions with your loved ones.**
- **Target different areas of your body**
- **Equivalent to a bio-mat.**

Powerful Chassis

Our chassis is one of the smallest in size, yet very powerful, which can fit on a nightstand or at the end table.

- **Set for lower power levels for longer gentle therapy.**
- **Built in protection to prevent overheating and over driving the amplifier**
- **2500-watt power supply is enough for deep penetration of the magnetic field.**

Advanced Coil Design

Our coil has the most advanced design in today's market, engineered to make the most of the chassis' power and abilities.

- **Tuned for optimal wide range performance.**
- **Made slightly adjustable to better fit over your head**
- **Targets and delivers the magnetic field where you need it and at the levels you want.**

Why a Remote Frequency Device?

A remote frequency device allows you to generate frequencies with an external device like the tablet or laptop. Being the most convenient way to control frequencies for your PEMF Therapy sessions without downloading any less effective apps or programs, it allows you to choose a frequency and play it at your own pace, and time.

TRUSTED BY CHIROPRACTORS

I haven't slept more than 6 hours since the auto accident but beginning the first day that I powered on the PEMF I have slept over 8 hours each night. My thoughts are clearer and my stamina is increasing already. We have been trying everything under the sun and in one day this PEMF machine has changed the entire game, I've been having so much fun exploring and experimenting and enjoy unlocking its full potential everywhere.

My Thoughts are clearer and my stamina is increasing already

Frequently Asked Questions

What is the difference between TeslasPEMF Single coil and Dual coil systems?

Dual coil system gives you twice the coverage of pulsed electromagnetic field as it spreads the magnetic field more evenly over your body. You can share your sessions with Dual coil system and You can target different areas of your body.

What frequencies do I need to use?

PEMF frequencies break down into two basic groups below 100Hz and above 100Hz, more or less. Frequencies below 100Hz are referred to a "cell signalling" frequencies and above 100Hz you find the "resident frequencies" of pathogens. Frequencies below 100Hz can aid in improved blood circulation, better digestion, relieving inflammation, reducing pain, bone healing and soft tissue and supporting the healing of body systems. Low frequencies support your immune system.

What apps do I need?

We provide the operational apps.

What makes TeslasPEMF unique?

Versatility, power and Bigger range of frequencies.

Why is the TeslasPEMF coil so big?

The magnetic field produced by PEMF coils will vary greatly based on their size. Just like with speakers producing a sound field. You would not expect to be able to play music to a room full of people with a set of ear buds. They are just too small to hear unless they are right in your ear. With coils, the same holds true for magnetic field. If you want the field to penetrate deep into your body where it is needed, it must be large enough to create a large magnetic field.

Can my kids or pets be in the area when I am using the TeslasPEMF?

Absolutely. kids and pets, no problem. In fact, one of our customers purchased his TeslasPEMF to use on his dog! The FDA has gone so far as to state that the frequencies that PEMF machines can produce are not harmful and not invasive to the body. As with adults, if the child has an illness involving pathogens, a Herxheimer reaction can occur but this would not be from an occasional contact. It would have to be from a full session.

So common sense should be applied and make sure the child is old enough to communicate what is happening to them if you are going to do full sessions on them.

For traveling purposes, what is the weight of the TeslasPEMF?

The simple answer is about 10 lbs. for the coil. The TeslasPEMF chassis is slightly over 34 lbs. It has a pull handle and wheels for easy travelling. If travelling by air it can be a carry-on or you can check it in.
