# PRECAUTIONS / WARNINGS

**DO NOT** cover the ventilation holes or fan on top panel of the TeslasPEMF System.

**DO NOT** use high intensity settings for long periods of time. (*Over 1 Amp for longer than 30 minutes*)

**DO NOT** sleep during PEMF session.

**DO NOT** use coil on heat sensitive fabrics or materials. The heat may melt certain fabrics or materials. Wearing cotton clothing is best.

**DO NOT** use with alcohol or drugs.

**DO NOT** use while bathing or while in water or with transplanted organs or with electrical implants.

**DO NOT** use on children younger than 5 years of age without consulting a qualified practitioner. Keep TeslasPEMF System on a flat, level surface (*bottom side down*) to prevent overheating.

**DO NOT** run frequencies lower than 3 Hz or higher than 10,000 Hz (*10,000 Hz with the starter coil*). It may damage the TeslasPEMF SYSTEM amplifier. (*If you run lower frequencies below 25 Hz start volume very low under 20%*)

If the red light comes on, your TeslasPEMF System is overheated.

Keep all metal objects and electronic devices with a magnetic memory more than 3-4 feet away while coil is in use.

## FREQUENCY SOURCES

There are many frequency sources online, ensure you are using a reputable source. Many are apps that can be downloaded on your computer, tablet, or smartphone etc. We recommend "Function Generator Pro" on the app store. Be familiar with your chosen frequency program before running a session on the TeslasPEMF System. Additionally, do not choose a frequency that exceeds the limits of the coil. The starter coil that comes with the System Kit has a limit of 7Hz-10,000Hz. Be extra careful to avoid frequency sources where the company does not provide the exact frequency.

For additional information, search on "PEMF (*condition*)" on the NIH [pubmed.gov](http://pubmed.gov) website for many proven studies. You may also search on [scholar.google.com](http://scholar.google.com) for frequency information.

# STARTING YOUR SESSION

1. Watch "How to Run TeslasPEMF System Session" <http://TeslasPEMF.com>
2. Place TeslasPEMF System case on a sturdy, non-flammable, flat surface within power cable length of a wall outlet. If using an extension cord, use one rated for 15 amps.
3. Unlock latches on System lid by twisting lock counterclockwise and pulling up on latches.

4. Open lid, remove audio and power cables, and connect power cable to power source.

5. Lay coil(s) out on treatment area - a minimum of 4 feet away from all metal including the System unit.
6. Run the cable(s) directly from the coil(s) to the System.
7. Plug the Coil cable(s) into the coil socket(s).

**TO CONNECT:** It will only go in one way. Push coil plug in at 10 O'clock, twist to the right (*clockwise*) until it clicks and latches into place as shown in the figures below. **DO NOT** force it.

If running only one coil, make sure to plug coil into left socket and push the green coil switch down to the left. If running both coils, make sure to plug in both coils and push the green coil switch down to the right as shown in the figures below.

## One Coil System Set Up

Coil plugged into left socket / Green switch down on left side.

## Two Coil System Set Up

Plug in both coils / Green switch down on right side.

8. Flip power switch to **ON** as seen in figures below.

When turned on, light will turn on in power switch.

**Note:** The fan and fanlights will turn on. You should hear fans running inside the machine. Meters will light up as shown in the figure below:

At start, amp meter will light up and read between 00.0 - 00.8. It is normal for the numbers to jump around. (Protect indicator should only light up when it is overheated)

**Coil Current:**  
Stay below 7.0 Amps. Coil heat accumulates as current reading increases.

**Protect Indicator:**  
If turns ON, please lower application volume. Unit is running too high!

**Frequency:**  
Range: 30-999 Hz  
Out of range the meter becomes a magnetic field detector.

A photograph of the ElectroPEM device, a blue metal case with a control panel. The panel features a digital display showing '00.00', a red indicator light, and another digital display showing '0000'. The device is connected to various cables and is placed on a wooden surface.

Plug one end of the audio cable into your frequency source device (i.e. iPad, iPhone, MP3 player, or computer etc.) and plug the other end into TeslasPEMF System audio input socket as shown in figure below.

9. Plug one end of the audio cable into your frequency source device and plug the other into TeslasPEMF System audio input socket as show in figure below. Audio cable connects to smartphones, MP3 players, tablets, laptops and most other frequency source devices. If you have a new generation Apple product however, you may need a dongle.
10. **GET COMFORTABLE!** Most people hug the coil, however, when targeting a specific localized problem, it is recommended that the user place the coil on the part of the body that is affected. Make the user environment as stress-free and relaxing as possible. Tension and stress decrease the effectiveness of the session. Examples of different positions to place coil(s) are shown under “ Examples of Coil Positions ”
11. Push the play button on your source device to begin your session.
12. Check the power and frequency meters to test the unit and coil functionality.

# SINGLE COIL POSITIONS

# TWO COIL POSITIONS

one under elbow and other over abdomen

it is most effective when the coil is placed as close as possible to the area you want to treat

## SESSION NOTES

If the weight of the coil is uncomfortable, use an extra towel to pad it.

Unit will automatically shut off and turn the red light on if it overheats. (As shown in the figure below.)

The unit will restart when the machine cools 15 degrees. DO NOT turn the power switch off, as the fans will continue to run and cool the unit faster. Let the unit cool on its own. Make sure nothing is blocking the fan ventilation and air holes on the top panel.

**Protect indicator is on. (Wait for it to cool down. Run with lower power and check if coils are getting to hot)**

**Coil Current:**  
Stay below 7.0 Amps. Coil heat accumulates as current reading increases.

**Protect Indicator:**  
If turns ON, please lower application volume. Unit is running too high!

**Frequency:**  
Range: 30-999 Hz  
Out of range the meter becomes a magnetic field detector.

# ENDING YOUR SESSION

1. When the session is complete, unplug audio source.
2. Pull silver metal tab up on top of coil plug and twist cable plug to the left (*counter-clockwise*) until it will pull out as shown in figure below. **DO NOT** force it.

3. Wait 15-20 minutes before turning the power OFF. The fans help the unit cool properly.
4. When cool, switch Power to OFF and unplug from power source.
5. **DO NOT** store Coil(s) inside the TeslasPEMF System case. It may cause damage to the coil as well as the System top panel and meters.
6. Store unit and coil(s) in a cool, dry place.
7. Don't forget to follow up each session by drinking plenty of water. Remember your body is working hard and needs some tender love and care.

# SESSION TYPES & MORE ON FREQUENCIES

There are two basic types of PEMF sessions.

1. PEMF can be used to debilitate pathogens that cause harm to the body's systems and tissues. i.e. bacteria, viruses, etc.
2. PEMF sessions can also be used for re-building cellular structure and regeneration. Everybody needs a pick up and this is a great way to help the body's natural processes.

When selecting the appropriate frequencies and power levels, always keep the following in mind: The lower the frequency, the lower your power must be in order to prevent overheating. For instance, when using 20HZ, the power (*volume on your device*) may need to be around 60% to avoid overheating, however when using 306HZ the power may be at 100% because there is a low risk of overheating.

## POWER & FREQUENCY METERS

**NOTE:** The purpose of these meters is to act as EMF detectors.

**AMP METER:** The amp meter shows the TeslasPEMF System's power output. As the user increases or decreases the volume, the amp meter will change accordingly. For extended usage and to prevent overheating, keep the TeslasPEMF System below 1A as shown on Figure A on the next page.

**VOLT METER:** When the TeslasPEMF System is powered up, the voltage meter will likely read 130V. As the frequency rises, the voltage will too.

**Hz METER:** The Frequency Meter displays the frequency going through the coil(s) which is measured in HZ. Depending on the frequency and power, the frequency meter may not display the exact frequency and it may just flash instead, this is perfectly normal. This is more frequent when running low frequencies.

As the frequency rises, the voltage will rise, and the amps will decrease. As the frequency lowers, the voltage will decrease, and the amps will increase as shown from figure A and B (*PAGE 16*).
